Page 50

1 Q. (By Ms. Maimbourg) Doctor, I've handed
2 you what has been marked as Exhibit 9, and it's
3 entitled Potential Risks of Non-Mesh and Mesh SUI
4 Surgeries. Just take a look at it and let me know
5 when you're done.

6 A. Okay.

7 Q. So just with respect to the column on the
8 right that's entitled Mesh, do you agree that the
9 right -- that this column lists the risks of mesh
10 surgeries?

11 MS. MARIGLIANO: Object to the form.

12 THE WITNESS: Yes, I do.

13 Q. (By Ms. Maimbourg) And do you agree that
14 any -- if any of these risks develop, that the effect
15 on the patient could be temporary or chronic?

16 A. Yes.

17 Q. And do you agree that if any of these
18 risks developed, the effect on the patient could be
19 mild, moderate, or severe?

20 A. Yes, I do. Relative risks aren't listed
21 certainly here on this chart, so that would be one
22 issue that I'd have with the chart, just listing out
23 complications without putting down actually the
24 relative risks of the different complications.

Robert D. Moore, D.O.

Page 51

1 Q. Okay. If we have time, we'll go back over
2 that. You know what? Before we move on, I do want
3 to mark three articles that you brought with you
4 today, and I'm just going to have you identify them
5 for the record. What is Exhibit 10, Doctor?

6 (Exhibit 10 was marked for
7 identification.)

8 THE WITNESS: This is an abstract that we
9 presented at the American Urogynecology Society
10 meeting in 2014 on Indication of Surgical
11 Treatment of Midurethral Sling Complications, a
12 Multicenter Study.

13 Q. (By Ms. Maimbourg) Is that -- was that
14 mentioned in your report?

15 A. Yes.

16 Q. And then Exhibit 11 is also the same data
17 presented at a different time?

18 (Exhibit 11 was marked for
19 identification.)

20 THE WITNESS: No, it's basically just a
21 sub-analysis of the data that this first one
22 that we talked about, Exhibit 10, is just about
23 slings. This one is talking about specifically
24 either slings or pelvic organ prolapse

Robert D. Moore, D.O.

Page 52

1 indications for removal, and then --

2 (Exhibit 12 was marked for
3 identification.)

4 Q. (By Ms. Maimbourg) And then Exhibit 12,
5 you also brought this?

6 A. Exhibit 12 is kind of the main study that
7 actually classifies every patient that came in with a
8 mesh complication, utilizing the IUGA/ICS
9 classification of synthetic mesh complications of all
10 of these patients. So the first one is just
11 classifying the different complications via the
12 official IUGA/ICS classification system.

13 Q. When you said the first one, you were
14 actually holding Exhibit 12?

15 A. Exhibit 12, yes.

16 Q. Right. So are all of these -- and I
17 apologize, 'cause I didn't have those first two
18 abstracts before today. Is the data in 10 and 11
19 also in 12? No, is that -- partially?

20 A. Yes, I would say all of the patients --
21 it's the same patient population from three centers,
22 our center, Emory University, and Cleveland Clinic,
23 Florida. All the patients, all the mesh
24 complications are the same in each of these papers.

Robert D. Moore, D.O.

Page 53

1 However, 12, which is really the main paper -- 10 and
2 11, Exhibit 10 and 11 are sub-analysis of this data.

3 Q. That helps a lot. Keep those there,
4 because I will ask some questions about 12. Just
5 stick them up there. All right.

6 (Exhibit 13 was marked for
7 identification.)

8 Q. (By Ms. Maimbourg) I'm going to mark as
9 Exhibit 13 --

10 (Discussion off the record.)

11 Q. (By Ms. Maimbourg) Doctor, this was
12 printed on April 12th of 2016, if you could see that
13 date on the top left of this document. Could you
14 identify what this is?

15 A. This looks like a page from one of our
16 websites.

17 Q. And actually, it's the International
18 Center For Laparoscopic Urogynecology, right?

19 A. Yes.

20 Q. And that is one of the names of your
21 practice?

22 A. Yes.

23 Q. So in this section on TVT sling
24 complications, the first sentence says, Although the

Robert D. Moore, D.O.

Page 54

1 TVT sling is considered the standard of care,
2 complications can still occur. That's what it says,
3 right?

4 A. Yes.

5 Q. And are you referring to any particular
6 type of sling in that sentence that you say TVT?

7 A. I mean, we're using it more generically as
8 a retropubic midurethral sling.

9 Q. Would a standard -- strike that.

10 The second sentence says, It is very
11 important to note that it may not be the mesh itself
12 or the procedure that is the cause of the
13 complication. It may be how the mesh is placed or
14 how the body heals around the mesh that may be part
15 of the underlying cause. That's on the -- your
16 website page today, right?

17 A. This is actually -- I guess it's still
18 available. I mean, this is an older version of our
19 website, but if you just printed it April 12th, I
20 guess it's still out there and available, so --

21 Q. Well, is this still your opinion today?

22 A. Yes, I think we've updated it on our new
23 website as well to say as well, that it certainly
24 depends not only on those factors, but also the

Robert D. Moore, D.O.

Page 57

1 portion of that website, but this -- our new website
2 has been in the makings for at least a year.

3 Q. In terms of mesh removal, which you
4 describe on page 6 of your report, you have a couple
5 different numbers there, and I just wanted to clarify
6 in my own mind.

7 MS. MARIGLIANO: I'm sorry, what page?

8 MS. MAIMBOURG: Six.

9 Q. (By Ms. Maimbourg) Are you there?

10 A. Yes.

11 Q. So if you go down to the bottom, it says,
12 My partner and I have explanted more than 700 mesh
13 devices, with more than 500 since 2010?

14 A. Uh-huh.

15 Q. And then up above, on the very first part,
16 you said, More than 500 pieces in the last four
17 years. And since four years would actually be 2011
18 through 2015, I just wanted to clarify what the
19 accurate numbers are.

20 A. I would say the accurate numbers are this
21 down here below, because we know -- you know,
22 basically, we've got very good numbers based from the
23 study from the years 2011 to 2013, in which there was
24 500 pieces of meshes explanted in this trial. We did

Robert D. Moore, D.O.

Page 58

1 75 percent of those from the three centers, so that
2 was over 300, we've explanted in the last two years.
3 Approximately about a hundred to 120 each year. And
4 so then, prior to 2010, from 2002 through 2010, you
5 know, there was least 200. I don't have those exact
6 numbers.

7 Q. Of the ones that you've removed, you list
8 here that they've included Gynecare Prolift, Prolift
9 Plus M, Prosima, TVT retropubic, TVT-O, and TVT-Secur
10 slings. I just want to make sure that you are not
11 saying the only mesh devices you've removed are those
12 products; is that true?

13 A. That is true.

14 Q. So you've just listed the Ethicon
15 products, but you've also removed products of other
16 manufacturers, true?

17 A. Yes.

18 MS. MARIGLIANO: Can we take a break, if
19 you're at a good stopping point?

20 MS. MAIMBOURG: Sure. Yeah, let's take a
21 break. We've been going about an hour.

22 (A recess was taken.)

23 Q. (By Ms. Maimbourg) Doctor, we're back on
24 the record. I've asked you to look at your

Robert D. Moore, D.O.

Page 59

1 Exhibit 12, which is the data you were referring to,
2 I think, in one of your last answers. So this
3 multi-center study, you already identified the three
4 institutions. You and your partner removed 373
5 slings, right?

6 A. Yes.

7 Q. And that's actually on page 2, you have
8 that data. And in this article, you do not breakdown
9 the type of slings by number, correct?

10 A. Correct.

11 Q. And I take that that you removed
12 retropubic single incision TOT inside-out and TOT
13 outside-in?

14 A. Correct.

15 Q. Do you have that data somewhere?

16 A. It's actually in that -- one of those
17 abstracts that we talked about earlier, that's
18 specifically on mesh itself. I believe if you take a
19 break at it, what we've broken down --

20 Q. Let me ask you this. Does it include a
21 breakdown of how many TOT slings were inside-out
22 versus outside-in in this study?

23 A. It does not.

24 Q. Is that data somewhere back at Atlanta

Robert D. Moore, D.O.

Page 60

1 Research, Inc.?

2 A. If it's available, yes.

3 Q. Do you believe it's available?

4 A. I don't know how many numbers of patients
5 that we actually have identified inside-out versus
6 outside-in.

7 Q. In this article, you do not draw any
8 conclusions about pain being worse in the patients
9 with TOT inside-out compared to any other sling, do
10 you?

11 A. No, we do not.

12 Q. You also do not reach any conclusion to a
13 reasonable degree of certainty as to how the mesh was
14 causing pain, correct?

15 A. In this particular study?

16 Q. Yes.

17 A. No.

18 Q. In terms of conflict of interest
19 information on the last page, you say, none, right?

20 A. Correct.

21 Q. What is the purpose of the conflict of
22 interest provision in medical literature?

23 A. To provide readers any potential bias that
24 may be involved.

Robert D. Moore, D.O.

Page 61

1 Q. Did you disclose here that you had
2 testified at least nine times for plaintiffs alleging
3 injuries from pelvic mesh, including slings?

4 A. No.

5 Q. Do you believe that a reader of this
6 article is entitled to know that you have been and
7 are continuing to be an expert for the plaintiffs
8 suing mesh manufacturers?

9 MS. MARIGLIANO: Object to the form.

10 THE WITNESS: It's not part of the
11 requirements as far as they bring you through a
12 very stringent bias -- or not bias, but
13 disclosure and conflict of interest form. And
14 it's not part of the disclosure process of this
15 journal, or any other journal that I know of
16 right now.

17 Q. (By Ms. Maimbourg) So you don't believe
18 that it would be important, regardless of the process
19 you went through with this journal, you don't believe
20 it's important for readers of this article to know
21 that you're testifying on behalf of plaintiffs in
22 pelvic mesh litigation involving the very products
23 you are studying?

24 MS. MARIGLIANO: Object to the form.

Robert D. Moore, D.O.

Page 73

1 page 9, which you have labeled number 1, design
2 defects. The first thing you say in your heading is,
3 Tendency to cause pain, and bladder, bowel, and
4 sexual dysfunction secondary to location of mesh.

5 What is it about the location of the mesh
6 that creates this tendency? And if you could be
7 brief, I would appreciate it.

8 MS. MARIGLIANO: Object to the form.

9 Answer as completely as you need to.

10 THE WITNESS: Well, as briefly as, or as
11 elongated as it may be, specifically, with the
12 transobturator sling or location of the mesh in
13 the periurethral tissues extending out through
14 the obturator muscles, the adductor longus
15 muscles themselves, specifically with the TVT-O
16 having more mesh in the adductor muscles
17 themselves, with that type of placement of the
18 mesh, it's been noted over time that with
19 contraction -- with contraction, ultimately,
20 that can cause pain.

21 It then causes pelvic floor dysfunction,
22 because of dyssynergia and spasms throughout the
23 muscles that can affect bowel, bladder function,
24 and sexual function throughout the vagina and

Robert D. Moore, D.O.

Page 74

1 the pelvis.

2 Q. (By Ms. Maimbourg) So my question was
3 only about the location. So you told me your whole
4 opinion, right?

5 MS. MARIGLIANO: Object to the form.

6 THE WITNESS: Yes, but the location of the
7 mesh in the periurethral tissues, as well
8 extending out into specifically with the TOT and
9 TVT-O, obturator internus, externus adductor
10 muscles.

11 Q. (By Ms. Maimbourg) So in other words, as
12 I understand that, it's where the mesh is lying, and
13 it's the technique of getting it there that you are
14 calling here as a defect?

15 A. Yes, it's not only where the mesh is
16 lying, but also how it's placed specifically with the
17 TVT-O device, which includes the needles and the mesh
18 itself.

19 Q. In these two pages, and I'm basically
20 going through this the way you have set it up.

21 A. Okay.

22 Q. So in these two pages, subsection A, am I
23 correct that you cite nothing for the proposition
24 that the location of the mesh has a tendency to cause

Robert D. Moore, D.O.

Page 75

1 pain, bladder, bowel and sexual dysfunction?

2 MS. MARIGLIANO: You're just saying in
3 subsection A, you're asking if he said that or
4 if he --

5 MS. MAIMBOURG: Correct.

6 MS. MARIGLIANO: -- didn't include that?

7 MS. MAIMBOURG: That's exactly what I'm
8 asking, in these two pages.

9 MS. MARIGLIANO: I'm just going to object
10 to the form.

11 THE WITNESS: What I'm describing is
12 the -- in those two pages, and it gets into
13 specifics as far as where the mesh is implanted
14 and how it causes complications at the bottom of
15 page 10, and subset of B. In A itself, it's
16 just describing the placement of the initial
17 TOT, and then the subsequent development of the
18 TVT-O, and how that is placed itself.

19 Q. (By Ms. Maimbourg) So in these two pages
20 under subsection A, you don't cite any medical
21 literature for the proposition. You cite that in
22 other parts of your report?

23 A. Yes.

24 MS. MARIGLIANO: Well --

Robert D. Moore, D.O.

Page 76

1 Q. (By Ms. Maimbourg) So B --

2 MS. MARIGLIANO: Object to the form.

3 Q. (By Ms. Maimbourg) B is entitled, Mesh
4 Implanted in Groin Muscles Causes Complications, and
5 it's essentially one paragraph, right?

6 A. Yes.

7 Q. And you say here that the mesh -- bottom
8 of 10 -- these transverse mesh arms damage the
9 levator and obturator and adductor muscles. And so
10 I'm going to stop there, and ask you, what is your
11 support for that statement that the arms damage those
12 muscles?

13 A. The subsequent papers and literature that
14 have been -- that have described patients that have
15 prolonged groin pain, thigh pain, vaginal pain,
16 dyspareunia from the mesh arms lying within these
17 muscle groups themselves.

18 Q. Can you identify those articles?

19 A. Sure. I mean, as far as if we want to
20 take a look at long-term complications, meaning at
21 least pain of any kind of subsequent nature, or
22 having pain, then we can start with some of the
23 initial trials, the de Leval initial trials that
24 basically they relied upon, who's the inventor of the

Robert D. Moore, D.O.

Page 77

1 product, 26 percent groin pain. They didn't really
2 track that out.

3 And then as the papers started coming out
4 in the literature, including Laurikainen's original
5 paper, I think was 2007 in the Green Journal of
6 OB/GYN, groin pains of 16 percent at a year,
7 5 percent persistent groin pain, which is still
8 significantly impacting women at that point in time.
9 And then we can list Yik Lim and Marcus Carey, the
10 same amount -- actually, 24 percent short-term pain,
11 4 percent long-term pain.

12 Q. You know what? We'll get into -- are
13 these all cited in your report, 'cause --

14 A. They are.

15 Q. -- we'll probably get into some of them.

16 A. They are.

17 Q. Do you mind if I move on, and we can talk
18 about them as they come up?

19 A. Sure.

20 Q. All right. I wanted to ask you, though,
21 with respect to the definition of prolonged pain,
22 which that's the term you used in your answer, could
23 you tell me your understanding of what that is versus
24 what is postoperative pain? And in your mind, is

Robert D. Moore, D.O.

Page 78

1 there a difference in this analysis?

2 A. Yes, I mean, I think really any type of
3 postoperative pain should be resolved by six weeks
4 and 12 weeks, probably at the latest. Anything that
5 is beyond that, I believe becomes more of a prolonged
6 pain issue. And certainly something that's going
7 beyond six months to one year is more of a persistent
8 type of pain issue.

9 Q. So at the top of page 11, you say, If pain
10 results in the levator ani region secondary to the
11 mesh -- what did you mean, secondary to the mesh?

12 A. Specifically, if there's a mesh arm in
13 that muscle creating contraction, creating fibrosis,
14 a chronic inflammatory reaction, that creates
15 shrinkage of the mesh in the surrounding tissues that
16 creates nerve entrapment or pain for any of those
17 reasons, then that's going to ultimately affect the
18 muscles throughout the pelvic floor.

19 Q. Now, in this paragraph, same paragraph
20 where we're talking, you do cite the Cochrane review
21 showing -- you say, overall rates of groin pain
22 higher in the TOT group, right?

23 A. Yes.

24 Q. You cite the Cochrane review. Now, does

Robert D. Moore, D.O.

Page 79

1 the Cochrane review give a probable explanation or
2 reason for this, or is it just reporting the
3 statistics?

4 A. The Cochrane review is considered probably
5 the kind of leading authority on data analysis from
6 high level studies, evaluating all of the literature
7 that's been reported.

8 Q. So is it just reporting the statistics or
9 is it giving a probable explanation?

10 A. It reports the statistics.

11 Q. So can you cite to me any article -- and
12 again, we can maybe get into this, but as you sit
13 here right now, in this part of the deposition, can
14 you cite to me any article that has verified, through
15 a scientific process, your previous answer about how
16 the mesh arms in the muscle cause pain through
17 various mechanisms, where that has been proven?

18 A. I mean, there's many, many articles that
19 describe chronic pain in this region secondary to
20 TVT-O slings, and many come up with scientific
21 reasoning behind it. So I'm not sure really what
22 your -- what your question is, as far as to how you
23 can specifically state the kind of scientific
24 reasoning behind that.

Robert D. Moore, D.O.

Page 80

1 Q. Well, I'll explain to you what I mean.
2 Many of the articles you cite here, which I've read,
3 refer to possibilities. They use the word "may,"
4 they use the word "can," and I have not found in any
5 of the articles on your reliance list that you cite,
6 where an author in a scientific publication has said,
7 to a reasonable degree of medical probability, or
8 similar words, that the mesh arms in the muscles are
9 causing the type of contraction and scarring that you
10 believe, in your opinion, causes the pain. Have I
11 missed something, is there an article that does that?

12 MS. MARIGLIANO: Object to the form.

13 THE WITNESS: Well, I think that basically
14 journal articles, and journals themselves, the
15 verbiage that is required is different. That is
16 what that particular author is stating. They
17 also would state that if the mesh wasn't there,
18 certainly the patient wouldn't have pain in that
19 specific location.

20 So there's been multiple studies that have
21 looked at anatomical directions of this mesh,
22 where it's going, the TVT-O in relationship to
23 the obturator nerves. Also saying why are these
24 patients in the TVT-Os having more groin pain

Robert D. Moore, D.O.

Page 81

1 than those that don't have mesh in that specific
2 area.

3 And so although they may say "may" or
4 "perhaps" or "theoretically," which is verbiage
5 that journals, medical journals require, it's in
6 my opinion, to a medical degree of certainty,
7 that this is what's causing these complications.

8 Q. (By Ms. Maimbourg) And what is your
9 personal opinion based on?

10 A. My personal opinion is based on the -- my
11 medical training, my experience, my taking care of
12 patients with these type of complications, implanting
13 and doing research trials on every type of avenue
14 that you can with midurethral slings. And knowing
15 that we don't see groin pain in patients that have a
16 retropubic sling that is similar to this type of a
17 pain, when the mesh is in the muscle or irritating
18 the nerve directly.

19 Q. Doctor, on page 12 of your report, when
20 we're talking about pain syndromes, one of the
21 articles you cite several times in your report is
22 Teo. Did I say that right? Is it -- it's T-E-O?

23 A. Correct. I'm not sure of the
24 pronunciation.

Robert D. Moore, D.O.

Page 82

1 Q. I was wondering if we could go off the
2 record for a minute, so you could locate that in your
3 binder?

4 MS. MARIGLIANO: We can -- it's -- oh,
5 it's in there.

6 THE WITNESS: No, it's right here.

7 MS. MAIMBOURG: I don't know how long it's
8 going to take.

9 (Discussion off the record.)

10 Q. (By Ms. Maimbourg) What is the
11 publication date on the bottom, to the right?

12 A. 2011.

13 Q. No, the month?

14 A. April.

15 Q. All right, so -- 'cause you have February
16 cited here, and I wanted to make sure that I have the
17 same article. Let me see yours, just to make sure
18 it's the same as mine. Yes, it is. Okay. Doctor,
19 I'm actually going to mark my copy, so you can put
20 yours back in your notebook?

21 (Exhibit 17 was marked for
22 identification.)

23 Q. (By Ms. Maimbourg) And you describe on
24 page 12 of your report that this trial by Teo -- do

Robert D. Moore, D.O.

Page 83

1 you think that's how he pronounces it? T-E-O? How
2 would you pronounce that? You don't know?

3 A. I would have say Teo.

4 Q. Teo. All right. So you say in your
5 report on page 12, This trial -- I believe you're
6 talking about this trial, Teo -- was perhaps the
7 clearest example of the clinical and scientific
8 impact of pain syndromes caused by the TVT-O, and
9 comes from the results of an independent study that
10 was performed by several of Ethicon's KOLs. So
11 that's what you're referring to, Teo, right?

12 A. Yes.

13 Q. Now, you say in your report that the
14 investigators stopped the trial, because of excess
15 pain reports in the TVT-O arm, and you put in
16 parentheses, 26.4 percent pain reported at six
17 months, right?

18 A. Yes.

19 Q. And I think you actually referred to that
20 in one of your previous answers. So I'd like you to
21 go to page 1351 of the article, under the section
22 that's entitled, Results. Are you there? Results,
23 1351?

24 A. Yes.

Robert D. Moore, D.O.

Page 84

1 Q. The second paragraph that says, during
2 recruitment? Are you there?

3 A. Uh-huh.

4 Q. This paragraph says, During recruitment, a
5 few studies were published showing similar cure rates
6 for the two procedures, meaning obturator and
7 retropubic, but a high incidence of leg pain in
8 patients after receiving a transobturator tape.
9 After discussing these data at an investigator
10 meeting, we decided to stop recruitment before the
11 full calculated sample was recruited, since it was
12 deemed that clinical equipoise had been lost?

13 A. Correct.

14 Q. So the study was not stopped, as you
15 state, because of excess pain reports in the TVT-O
16 arm; is that true?

17 A. I believe it was due to the pain that they
18 were seeing as well as the discussion they had based
19 on that, and the literature that was in the -- that
20 had been being published.

21 Q. Well, in fact, that's not what that
22 paragraph says under Results, does it?

23 A. No, but I believe in the discussion, they
24 talk about that as well.

Robert D. Moore, D.O.

Page 85

1 Q. And then you say in your report that the
2 authors concluded it was no longer ethical to use the
3 TVT-O device, given the clear negative impact on
4 patient health. And if you look at the Results
5 section, where we just were a minute ago -- you're
6 there, you're on the right page.

7 A. Okay.

8 Q. It says, We believed it was no longer
9 ethical to randomize women to the TVT-O arm, in light
10 of these published studies --

11 A. Correct.

12 Q. -- but data on women already recruited
13 would be of value, right? Those two sentences are
14 different, are they not?

15 A. They're saying that those -- that it would
16 still be of value, that they were already -- that
17 those patients were already implanted and
18 certainly -- but they're not going to implant
19 anymore, they're not going to recruit anymore. So I
20 don't know whether or not these patients had already
21 been implanted or not.

22 Q. I guess it would be an unfair reading of
23 your report for anyone to believe that you were
24 saying here that the authors of this article believed

Robert D. Moore, D.O.

Page 86

1 it was unethical to use the TTVT-O device, that would
2 be an unfair reading of your statement.

3 MS. MARIGLIANO: Object to the form.

4 Q. (By Ms. Maimbourg) Right?

5 A. I think that what the authors are saying
6 is that they believe that it's unethical to implant
7 and/or recruit any more patients to continue this
8 patient trial, and implant anymore TTVT-Os. And that
9 based on their review of the literature and their
10 initial findings of a very high amount of groin pain
11 in those patients.

12 Q. All right. In the conclusion of the
13 article, on page 1355, the authors state, Short-term
14 cure rates at six months are similar for the two
15 procedures. TTVT-O results in a higher level of
16 postoperative and leg pain, although these problems
17 are transient. And then it says, The two procedures
18 have a high cure rate with a low rate of
19 complications, right? Right?

20 A. Yes, that's what it states.

21 Q. All right. So you, in your report,
22 several times quote a concluding message that I
23 cannot find in this article. And that concluding
24 message says, in your report, page 12, Given the

Robert D. Moore, D.O.

Page 87

1 comparable efficacy of the procedures, it seems
2 preferable to recommend retropubic tape placement to
3 avoid a high incidence of leg pain. Can you tell me
4 where in the article it says that?

5 MS. MARIGLIANO: I'm going to object.

6 He's not saying he's quoting that.

7 Q. (By Ms. Maimbourg) Well, can you tell me,
8 even if you're not quoting it, can you tell me where
9 in the article, the authors state, it seems
10 preferable to recommend retropubic tape placement, or
11 is that your conclusion, your own concluding message?

12 A. I mean, I'd have to go through this, you
13 know, kind of line by line to take a look at
14 the -- the last paragraph -- to take a look at, you
15 know, their exact verbiage throughout the thing. I
16 don't know if I'm quoting them, if you're saying you
17 don't see those exact words throughout there, I'll
18 take your word on that. But if -- that was my
19 conclusion as well as their summaries of their
20 discussion and their results.

21 Q. (By Ms. Maimbourg) So if you quote
22 something usually in your report, you would have it
23 as a single-spaced indented quote, right?

24 MS. MARIGLIANO: Object to the form.

Robert D. Moore, D.O.

Page 88

1 THE WITNESS: It may be, or it's in
2 quotations.

3 Q. (By Ms. Maimbourg) Well, take a look at
4 page 40 of your report, where you also quote this
5 article by Teo, the concluding message?

6 A. Okay.

7 Q. Are you on page 40 looking at it?

8 A. Uh-huh.

9 Q. Does that look like a quote to you? The
10 way it's set off, single-spaced indented?

11 A. Again, I don't know specifically if this
12 paragraph was supposed to be a quote directly from
13 the article.

14 Q. In terms of the leg pain, you say here,
15 this -- we're on page 13 in your report, This article
16 was not the first to show that TVT-O caused leg,
17 groin, thigh pain in more than one in four women who
18 were implanted, right?

19 A. Yes.

20 Q. And this study that we've been talking
21 about, the Teo study, involved 127 women. And, in
22 fact, if you look at the page 1354, they do say that
23 leg pain was experienced by 26.4 percent of women in
24 the TVT-O group, right?

Robert D. Moore, D.O.

Page 89

1 A. Yes.

2 Q. And the article also says, The problem
3 resolves spontaneously within three months, right?

4 A. Correct.

5 Q. And that would be within the postoperative
6 period that you previously defined?

7 A. Yes, in their particular study.

8 Q. So this study, in particular, does not
9 support your statement, or your claim that this leg
10 and groin pain can be severe, chronic, life-long, and
11 debilitating, does it?

12 MS. MARIGLIANO: Object to the form.

13 THE WITNESS: Not the particular study,
14 but if you continue on in the discussion, they
15 do have verbiage that does talk about those
16 concerns. And actually, a couple of the papers
17 we just talked about, including Laurikainen, as
18 well as Yik Lim, as well as the Latthe meta
19 analysis as well.

20 Q. (By Ms. Maimbourg) This study does not
21 give any support for your claim that it's the
22 proximity of the sling to nerves that is responsible
23 for causing the pain, does it?

24 MS. MARIGLIANO: Object to the form.

Robert D. Moore, D.O.

Page 90

1 THE WITNESS: This study basically shows
2 that when you place mesh tape into the groin
3 muscles, it can cause a significant amount of
4 albeit postoperative pain in this particular
5 patient population, but also lead to longer
6 periods of pain that's been shown in other
7 studies.

8 Q. (By Ms. Maimbourg) The purpose of this
9 study was not to prove that, and it doesn't show it,
10 right?

11 MS. MARIGLIANO: Object to the form.

12 THE WITNESS: Well, the purpose of this
13 study may have been to prove it, and take a
14 look, but they stopped the study, and didn't
15 look at patients beyond six months.

16 Q. (By Ms. Maimbourg) I'm not talking -- my
17 last question, I apologize if it was not clear, but I
18 really wasn't talking about longevity. I was talking
19 about mechanism.

20 A. Okay.

21 Q. And, you know, the authors of this article
22 talk about possibilities, and they don't talk
23 about -- they don't give an opinion in this article,
24 and they don't prove an opinion as to what is causing

Robert D. Moore, D.O.

Page 91

1 this postoperative pain, is that true?

2 MS. MARIGLIANO: Object to the form.

3 Q. (By Ms. Maimbourg) The only statements
4 are on page -- at the top of 1355, talk -- talks in
5 terms of possibilities?

6 A. Yeah, and they -- but they do go on to say
7 that cadaveric studies have revealed that the tape
8 passes much closer to the obturator nerve using the
9 inside-out than the outside technique. This could
10 possibly cause the obturator nerve to be more
11 susceptible to damage, inflammation and edema,
12 resulting in pain. Neuropathy resulting in gait
13 abnormality and numbness has also been reported, and
14 seems to be associated more with the inside-out
15 technique.

16 So I think they are giving their opinions
17 as to what the cause of pain is in this TVT-O
18 procedure.

19 Q. So they're talking about possibilities
20 here, correct? That's the word they use?

21 A. They are certainly talking about
22 possibilities and utilizing their expertise in being
23 researchers, clinicians, experts in urogynecology to
24 say what is the potential cause of this pain.

Robert D. Moore, D.O.

Page 92

1 Q. So researcher -- researchers are
2 fundamentally scientists, right?

3 A. Yes.

4 Q. And they deal in possibilities and
5 probabilities?

6 A. They do. And when they're writing for --

7 Q. I didn't have a question.

8 A. Okay.

9 Q. And, in fact, in your report, you say your
10 opinions you hold to a reasonable degree of medical
11 certainty, I think you used the term, right?

12 A. Yes.

13 Q. And you're not giving opinions to
14 possibilities, right?

15 A. I'm giving opinions, based on a reasonable
16 degree of medical certainty, which in this instance,
17 we're taking a look at risk versus benefits, and
18 risks outweighing benefits with the TVT-O procedure.
19 And some of these journals hold a higher degree of
20 probability and require that to be able to say
21 certain verbiage. So this is why investigators will
22 say these types of -- utilize this type of language
23 in their studies.

24 Q. So maybe if these authors had put in the

Robert D. Moore, D.O.

Page 93

1 word probable, their article may not have been
2 accepted, because it would not have passed the
3 peer-review process, because it's bad science, right?

4 MS. MARIGLIANO: I'm going to object to
5 the form. You're confusing legal verbiage with
6 verbiage that's using medical in articles.

7 MS. MAIMBOURG: You're not allowed to make
8 speaking objections, I'm sorry.

9 MS. MARIGLIANO: So that's my objection.

10 THE WITNESS: Well, we don't know that.

11 Q. (By Ms. Maimbourg) We don't know that.
12 We would be speculating, right?

13 A. Yes.

14 Q. So let's move on to page 13 through 24 of
15 your report, which is the next section, quite long.
16 And it's entitled, Inside-Out Technique of TVT-O
17 Increases Risk of Nerve Injury/Pain. So when I look
18 at this section, particularly page 14, and I'm
19 looking kind of down here at the bottom, I think what
20 you're saying here is that the technique of inserting
21 the TVT-O puts it too close to certain nerves, which
22 could actually damage the nerve at implantation or be
23 close enough, so that fibrosis around the mesh could
24 very easily cause nerve damage and pain. Does that

Robert D. Moore, D.O.

Page 94

1 sort of summarize what you're saying about this
2 inside-out technique?

3 MS. MARIGLIANO: I'm just going to object
4 to the form.

5 THE WITNESS: It's -- yes, it's talking
6 about one aspect of the -- of the pain.

7 Q. (By Ms. Maimbourg) And this defect has to
8 do with the technique of implanting the product. And
9 in this particular part of your opinion, you're not
10 talking about the product itself, you're talking
11 about the technique of implanting?

12 A. Well, I'm talking about the product,
13 because the product involves the implantation process
14 of going from the inside-out. It's part of the
15 product, it's part of the device as all -- all of the
16 different components of it are.

17 Q. So you're defining the technique as the
18 same as the product?

19 A. The technique is part of the product.
20 This particular product was the only one that was
21 developed to go from inside to outside. And
22 specifically, the way that it's placed, including all
23 of the components of the product, including the metal
24 wing tip guide, the needles, the mesh, the sheath are

Robert D. Moore, D.O.

Page 95

1 all part of the procedure.

2 Q. Right, but you're -- the title of this
3 section of your report is, The Technique of TVT-O
4 Increases Risk of Nerve Injury/Pain, right? That's
5 how you titled it?

6 A. Correct.

7 Q. All right. And in part of this section,
8 you quote an article by Piet Hinoul, and I believe
9 you say on page 15 -- well, take a look at what you
10 say there. Are you there in the report?

11 A. Yes.

12 MS. MARIGLIANO: I'm not there. Oh,
13 you're talking about on page 15, okay, I see.

14 Q. (By Ms. Maimbourg) So you quote him
15 to -- that he states that, The suspicion that the
16 inside-out procedure is linked to more neurological
17 injuries was already raised in de Leval's original
18 article. A recent review of the data collected by
19 the MAUDE database also implies more pain, et cetera,
20 et cetera, right?

21 A. Yes.

22 (Exhibit 18 was marked for
23 identification.)

24 Q. (By Ms. Maimbourg) I'm handing you that

Robert D. Moore, D.O.

Page 96

1 article that you've quoted, and I'd like you to go to
2 page 1205, so we can read the rest of the quote.

3 Could you go to page 1205, I'm sorry.

4 A. 1205 is the first page.

5 MS. MARIGLIANO: Look up here
6 (indicating).

7 THE WITNESS: Okay. Got it. Okay.

8 Q. (By Ms. Maimbourg) The column on the
9 left, I'm going to show you mine. See this green,
10 that's where you quoted?

11 A. Okay.

12 Q. Okay. And I'm going to after that
13 quote. After the quote about the MAUDE database,
14 Dr. Hinoul says that the MAUDE database needs to be
15 interpreted cautiously, as no incidence rate can be
16 derived from them, and reporting bias cannot be
17 accounted for.

18 Do you agree with that, with respect to
19 the MAUDE database?

20 A. I would agree that incident rate cannot be
21 derived from them, and reporting bias also cannot be
22 accounted for.

23 Q. And then he goes on to cite an article by
24 Debodinance that was a non-randomized prospective

Robert D. Moore, D.O.

Page 97

1 study compared outside-in Monarc to inside-out TVT-O,
2 and found no difference in thigh pain between both
3 groups, right?

4 A. He did.

5 Q. And that -- and that article would be
6 contrary to your opinions in this case that the
7 inside-out approach causes an increase of pain over
8 the outside-in, right?

9 MS. MARIGLIANO: Object to the form.

10 THE WITNESS: Not necessarily. I mean,
11 there's one study that he quotes, and there's
12 probably a couple more that show the same amount
13 of groin pain in the inside-out versus the
14 outside-in. However, there's multiple -- more
15 studies that also show an increased amount of
16 pain with the inside-out versus the outside-in.

17 So he's quoting one particular study and
18 there may be a couple more, but I can probably
19 quote more studies overall that show a higher
20 rate of pain with inside-out TVT-O versus
21 outside-in approach.

22 Q. (By Ms. Maimbourg) You did not choose to
23 put the Debodinance article in your report, because
24 it doesn't support your opinions, right?

Robert D. Moore, D.O.

Page 98

1 MS. MARIGLIANO: Object to the form.

2 THE WITNESS: The Debodinance article is
3 part of the list of papers that's in
4 my -- that's in -- that's in my reliance list.

5 Q. (By Ms. Maimbourg) Was that one that you
6 put there, or did the plaintiffs give it to you?

7 A. The Debodinance? I don't know.

8 Q. You also talk about the Haddad article on
9 page 15 and 16?

10 A. Yes.

11 Q. You have a lot of quotes from there. I'll
12 pull it out and mark it, but -- if you want. It
13 seems to me that all the quotes that you have here
14 are merely the author's regurgitation of certain
15 articles, and do not scientifically establish the
16 truth of anything they're saying.

17 MS. MARIGLIANO: Object to the form.

18 THE WITNESS: Well, I wouldn't say --
19 again, I mean, we're getting into these
20 discussions about what's science and what's
21 truth, and what's a reasonable degree of
22 certainty. That's the verbiage that's used in
23 literature and journals versus the degree of
24 certainty of what they -- they might have

Robert D. Moore, D.O.

Page 99

1 opinions on. What they're doing here is showing
2 all of the different literature supporting their
3 findings and their views as well, and discussing
4 these issues and complications.

5 Q. (By Ms. Maimbourg) Doctor, that article
6 had to do with BMI, and it didn't even reach
7 statistical significance, right?

8 A. I don't know that per se, as far as the
9 statistical significance.

10 Q. And all of these statements actually had
11 nothing to do with their -- the purpose of their
12 study, they were just giving background right?

13 MS. MARIGLIANO: Object to the form.

14 THE WITNESS: Again, correct, they were
15 talking about -- you said they were just
16 regurgitating other papers, but not saying
17 anything scientifically. I think that they're
18 supporting -- when one writes a discussion to a
19 paper, they're supporting either their theories
20 or other theories with different papers in the
21 literature.

22 Q. (By Ms. Maimbourg) So on the next page,
23 when you talk about -- well, we're on 16 and 17. I
24 didn't mean it skip too far ahead. You cite two

Robert D. Moore, D.O.

Page 100

1 articles, Collinet and Lim, L-I-M, in support of your
2 statement that a number of studies have suggested a
3 high-risk of postoperative groin pain with the
4 inside-out treatment.

5 When you use the term, postoperative groin
6 pain here, are you referring to that six to 12-week
7 period after implant?

8 A. I am here, but these particular papers
9 also are ones that show a higher rate of long-term
10 groin pain up to a year.

11 Q. So the Collinet paper only went through 12
12 weeks, right?

13 A. No, the Collinet paper is the French
14 registry of, I think, 985 patients that reported on
15 one-year pain rates of 3 percent. Actually, this is
16 wrong, it's 4.7. That should be 2.7, which I
17 think --

18 Q. It should be 2.7, right?

19 A. It's 2.7 percent, right. Yeah, and that's
20 quoted later, so that's a typo there.

21 Q. And when you're saying there, what page
22 are you referring to?

23 A. Page 17, about halfway down, residual rate
24 of pain of 2.7 percent.

Robert D. Moore, D.O.

Page 101

1 (Exhibit 19 was marked for
2 identification.)

3 Q. (By Ms. Maimbourg) So if we look at the
4 Collinet article, which I've placed before you as
5 Exhibit 19, this study did not look at long-term
6 pain, as far as I know, because if you look on page
7 713, they're talking about four to 12 weeks. Maybe I
8 missed something, but this does not appear to be a
9 long-term pain article.

10 A. Residual pain of 2.7 percent.

11 Q. It says, up above, postoperative
12 complications occurring immediately after surgery, or
13 by the first follow-up visit, four to 12 weeks, are
14 shown in table 3. And table 3, residual pain,
15 2.7 percent. So the Collinet article is not about
16 long-term pain.

17 A. Right, they quote residual pain at 12
18 weeks, yes.

19 Q. On page 18, of your report -- are you
20 there?

21 A. Yes.

22 Q. Right about here (indicating), Ethicon
23 should never have released an inside-out technique?

24 A. Okay.

Robert D. Moore, D.O.

Page 102

1 Q. Do you see that? That that's your
2 opinion, right?

3 A. Yes.

4 Q. And this is what we've been talking about
5 here, they should never have released a -- this
6 technique, right?

7 A. The inside-out technique is the TVT-O, so
8 that's what I'm referring to.

9 Q. Now, you cite to Doctor -- or Professor
10 de Leval's supposed statements on page 18. And just
11 to be clear, you're citing an internal report, where
12 someone is reporting what Dr. de Leval said, right?

13 A. Yes.

14 Q. Is that what it appears to be?

15 A. Yes.

16 Q. And you have this in single-spaced
17 paragraph indented, which would imply it's a quote.
18 Did you mean to imply it was a quote?

19 A. Yes.

20 Q. And do you practice evidence-based
21 medicine in your job as a urogynecologist and
22 surgeon?

23 A. Yes, I try to.

24 Q. Do you consider internal company documents

Robert D. Moore, D.O.

Page 103

1 and e-mails to be a part of evidence-based machine?

2 A. I think that it's a part of good medicine
3 to know all the information that you can know, so it
4 may ultimately become part of evidence-base medicine.

5 Q. You've implanted devices, other than
6 pelvic mesh?

7 A. Yes.

8 Q. Can you give me an example?

9 A. The InterStim device.

10 Q. Okay, that's a good one. Let's talk about
11 InterStim. Either before implanting your first one,
12 or at any time in your practice, have you ever asked
13 the manufacturer the InterStim to give you their
14 internal memos and e-mails regarding the development
15 of the product?

16 A. No, but we expect the representatives of
17 that company to be forthright and forthcoming with
18 any and all information that they may have about
19 their product, pluses or minuses, negatives or
20 positives.

21 Q. When you were a consultant to AMS
22 regarding Monarc, did you ever tell the people you
23 were working with that they should distribute their
24 internal company e-mails and their internal

Robert D. Moore, D.O.

Page 110

1 type of different slings. So basically, my clinical
2 background, as well as studies in the literature, as
3 well as Ethicon's own internal documents, basically
4 confirming that there's less risk of groin pain and
5 issues with the sling that does not go all the way
6 through the groin muscles.

7 Q. The studies in the literature, would those
8 be studies that show what -- what particular studies
9 in the literature? Are they all cited here in your
10 report?

11 A. They should be. I mean, specifically,
12 there's been several studies that have been
13 comparative trials with Abbrevio versus TTVT-O. And
14 all showing various amounts of decreased risk of
15 groin pain, both in short-term and some in the
16 long-term. Specifically, the paper from Brown, and
17 Shaw and Rardin showing the fact that you have 9
18 percent rate of groin pain with the TTVT-O versus
19 1 percent in Abbrevio. And 25 percent of those
20 patients that had groin pain in the TTVT-O required a
21 groin dissection. So I mean, you weigh those
22 risk/benefits and clearly the TTVT-O -- Abbrevio looks
23 like that it's a much safer alternative.

24 Q. From your extensive review of the Ethicon

Robert D. Moore, D.O.

Page 111

1 documents provided to you, do you know when the
2 product went into development?

3 A. The product initially was basically
4 Professor de Leval --

5 Q. I'm looking for a date.

6 A. The first time that it was brought up was
7 2004.

8 Q. When was it cleared by the FDA?

9 A. I believe 2009.

10 Q. The date I have is July 1st, 2010?

11 A. Okay.

12 Q. Would you perhaps accept my
13 representation?

14 A. Sure.

15 Q. Do you agree that Abbrevio could not have
16 been implanted before it was cleared by FDA?

17 A. I do. I believe as well, though, that it
18 could have been developed and approved a whole lot
19 before 2009.

20 Q. Do you agree that -- understanding what
21 you're saying, you're saying that Ethicon should have
22 put it into development sooner, but would you agree
23 that if one of these plaintiffs in a case in which
24 you've been identified as a general expert was

Robert D. Moore, D.O.

Page 112

1 implanted before July 1 of 2010, that Abbrevo was not
2 a safer option for her because the product was not
3 cleared?

4 A. Correct.

5 Q. Since it's your opinion that Abbrevo is a
6 safer option than TVT-O, I would assume that you have
7 no criticism of its design; is that true?

8 A. I still am critical of passing needles
9 through the groin. I still believe that a Mini sling
10 that does not have to be passed -- anything passed
11 through the groin, including needles, would be a
12 safer alternative, as long as the clinical efficacy
13 and the safety is there as well with that procedure.
14 So I'm not sure if I would go as far as I don't have
15 any criticisms of the design of the Abbrevo.

16 Q. Well, might you show up in a case
17 criticizing Abbrevo, where a plaintiff is claiming
18 injuries? I mean, would it go that far?

19 MS. MARIGLIANO: Object to the form. Go
20 ahead.

21 THE WITNESS: At this point in time, no, I
22 don't believe that would be the case.

23 Q. (By Ms. Maimbourg) Do you have any
24 criticisms of the polypropylene mesh that is used in

Robert D. Moore, D.O.

Page 113

1 the Abbrevo?

2 MS. MARIGLIANO: Object to the form.

3 THE WITNESS: I believe any criticism that
4 I have of the mesh of TVT-O would be the same
5 criticisms that I would have of it for the
6 Abbrevo. I believe that since it's not as long,
7 that there's a potential for less contraction
8 and less kind of stretching out and curling and
9 roping of the sling, which would be a positive
10 for Abbrevo.

11 Q. (By Ms. Maimbourg) So when you were
12 implanting the AMS devices, before they were removed
13 from the market, they are polypropylene mesh slings,
14 right?

15 A. Correct.

16 Q. And you didn't have any safety concerns
17 about implanting that polypropylene mesh, did you?

18 A. No.

19 Q. Do you know anything about the difference
20 between the polypropylene in -- in that Sparc sling
21 and the polypropylene in any of the Ethicon products?

22 A. No.

23 Q. Now, in terms of the Abbrevo being a safer
24 option, I know you relied on certain company

Robert D. Moore, D.O.

Page 132

1 Q. Do you agree that a manufacturer does not
2 need to tell a surgeon about the basics of sterile
3 technique when doing surgery?

4 A. No, that would be inherent to their
5 training.

6 Q. So we don't -- and Ethicon doesn't have to
7 tell surgeons to wash their hands, because if they
8 don't, it could cause a fatal infection, right?

9 A. Correct.

10 Q. And manufacturers don't have to tell
11 surgeons that they need to consider the type of
12 anesthesia that the patient has to have before
13 surgery?

14 A. Correct.

15 Q. And a manufacturer doesn't have to tell a
16 surgeon about the different risks of different
17 surgical positions a patient could be put in?

18 A. No, I disagree with that one, because
19 specifically if the position is critical for
20 placement of that product or procedure that is going
21 to make it safer or decrease risk of complications,
22 then yes, they are -- they should be responsible for
23 relaying that information to physicians.

24 Q. You state in your report that a physician

Robert D. Moore, D.O.

Page 133

1 must be warned of a frequent -- of the frequency,
2 severity, duration, and potential permanence of
3 adverse events by a manufacturer. That is your
4 opinion, correct?

5 A. Yes.

6 Q. What is the basis for your opinion that a
7 manufacturer should warn of frequency, severity,
8 duration, and potential permanence?

9 A. I think it's the surgeon's right to have
10 that information at their hands, to be able to offer
11 treatments and be forthcoming and forthright to their
12 own patients, so that the patients can understand the
13 risks and complications of any procedure they may be
14 undergoing. So if that information is available to a
15 manufacturer, then certainly it needs to be relayed
16 to the physician and patients.

17 Q. When you were a consultant for AMS, did
18 you advocate that position to them?

19 A. Yes.

20 Q. And did they put frequency, severity,
21 duration, and potential permanence into their IFU?

22 MS. MARIGLIANO: Object to the form.

23 THE WITNESS: I don't know about that. I
24 know during any type of professional education

Robert D. Moore, D.O.

Page 134

1 training that I did for them, we certainly
2 relayed all of that information to the
3 physicians.

4 Q. (By Ms. Maimbourg) Right, so a
5 manufacturer can pass on information in ways other
6 than in the IFU, right?

7 A. Sure, but you weren't asking me initially
8 whether it was just in the IFU. You said, should
9 they give this information.

10 Q. Okay. My fault. So just so I'm clear
11 you're not saying that the IFU, to be adequate, must
12 include frequency, severity, duration, and potential
13 permanence of adverse events?

14 A. I am saying, yes, it should be included in
15 the IFU.

16 Q. All right. And my question to you, then,
17 is, when you were at -- when you were assisting AMS
18 as a consultant, are you aware of whether AMS ever
19 included that type of this information in the IFUs
20 for its sling products?

21 A. I'm not aware specifically. I don't
22 recall the IFU details specifically.

23 Q. And since you've read all the literature
24 in that big binder before you, what should those

Robert D. Moore, D.O.

Page 135

1 numbers in the IFU be today for, let's say, the TVT
2 retropubic as to the frequency of anything you want
3 to pick right now, any adverse event?

4 MS. MARIGLIANO: Object to the form.

5 THE WITNESS: I think that it needs to be
6 basically consistent with what's in the
7 literature, what's in -- within the Cochrane
8 reviews, the meta analysis, their own internal
9 studies, their own documents. They've got
10 internal studies that haven't been published
11 before.

12 So whatever information they have, they
13 should produce that, risk of mesh extrusion for
14 the retropubic TVT seems to be generally in the
15 range of 1 to 2.5 percent. That should be
16 listed. So any of that information that's
17 there, it should be in there.

18 Q. (By Ms. Maimbourg) You would agree,
19 though, that the literature is quite varied as to
20 how -- strike that.

21 You would agree with me that if you were
22 going to go look for the frequency of a particular
23 adverse event in the medical literature, you would
24 find a variety of numbers?

Robert D. Moore, D.O.

Page 136

1 A. Sure. So they probably should include a
2 variety of numbers, from 1 percent to 30 percent.

3 Q. That's your opinion?

4 A. Yes.

5 Q. Is it your opinion that the Instructions
6 For Use should include a statement about mesh
7 degradation?

8 MS. MARIGLIANO: Object to the form.

9 MS. MAIMBOURG: Can you tell me how I can
10 cure that objection?

11 MS. MARIGLIANO: You said how -- number
12 one, I don't think he's offering any opinions
13 about degradation.

14 MS. MAIMBOURG: Okay. If he's not, then
15 that's swell.

16 Q. (By Ms. Maimbourg) Are you offering any
17 opinions about degradation?

18 A. No.

19 Q. Are you offering any opinions about
20 excessive and chronic foreign body reaction?

21 A. Where are we looking at right now, or are
22 we?

23 Q. I'm just asking, in general, are you going
24 to give expert opinions about polypropylene mesh used

Robert D. Moore, D.O.

Page 137

1 in TVT-O, causing excessive and chronic foreign body
2 reaction?

3 A. Only in relation to any type of chronic
4 inflammatory effects, scarring, that occurs that
5 would ultimately create pain from nerve or muscle
6 damage.

7 Q. Are you saying that should be in the IFU?

8 A. I think if they have evidence of a chronic
9 inflammatory response, and not a transitory
10 inflammatory response, then that should be included
11 in the IFU, yes.

12 Q. And based on everything you've reviewed,
13 did Ethicon have that evidence?

14 A. Yes.

15 Q. And is what -- the evidence they had, is
16 it included in your report at page 30?

17 A. Yes. Or actually, probably, I think it's
18 on the next page as well.

19 Q. So you're quoting testimony from Piet
20 Hinoul and Charlotte Owens. Is there anything else
21 that you're relying on for your opinion?

22 A. I think that if you get to like tab number
23 20, on page 33, it gets into more of some of the
24 different studies that were both in their internal

Robert D. Moore, D.O.

Page 138

1 documents, as well as meetings with Klosterhalfen,
2 who Professor Klosterhalfen was one of their
3 consultants, but did a lot of publishing in the
4 literature about chronic inflammatory reactions, mesh
5 contraction, and subsequent issues with pain and
6 nerve entrapment.

7 Q. On page 32, you talking about the 2015
8 Instructions For Use?

9 A. Yes.

10 Q. With respect to TVT-O, correct? And you
11 say, all of these risks were known to Ethicon before
12 2015?

13 A. Uh-huh.

14 Q. Is that a yes?

15 A. I'm sorry, yes.

16 Q. Can you say that these risks were not
17 known to doctors before 2015, can you say that?

18 MS. MARIGLIANO: Object to the form.

19 THE WITNESS: I can say that some of these
20 risks were probably not known to some or many
21 doctors.

22 Q. (By Ms. Maimbourg) Some doctors knew them
23 all, right?

24 MS. MARIGLIANO: Object to the form.

Robert D. Moore, D.O.

Page 139

1 THE WITNESS: Yes.

2 Q. (By Ms. Maimbourg) You knew them all
3 before they were put in the IFU, right?

4 A. Yes.

5 Q. Have you done any surveys of doctors, or
6 do you have any kind of base of knowledge to know
7 what doctors who are implanting slings know or don't
8 know?

9 A. Only based upon my experience of training
10 and professional education of hundreds of doctors at
11 various levels, in talking with them, and figuring
12 out what they know and don't know, but no formal
13 surveys, no.

14 Q. Is the 2015 IFU for TVT-O adequate, in
15 your opinion?

16 A. I think the only thing that I would add to
17 this would be the fact that it talks about needing
18 multiple surgeries to remove the mesh, but it doesn't
19 talk about the fact that it could be impossible to
20 remove all the mesh, and that should be noted.

21 Q. Anything else to make it adequate?

22 A. I would also say the mesh is a permanent
23 implant, significant dissection may be -- as a
24 continuation of the -- the line that says, the mesh

Robert D. Moore, D.O.

Page 140

1 is a permanent implant, and significant dissection
2 may be required if the mesh needs to be removed.
3 That could cause -- that this could cause, you know,
4 permanent -- even more permanent, more pain, and more
5 nerve damage that's permanent to the leg. In
6 addition, saying that there's no guarantee that all
7 the mesh can be removed, or any of the complications
8 caused by the mesh would be reversed by some -- a
9 major operation like that.

10 Q. Anything else?

11 A. I don't believe so.

12 Q. So in this section of the report, you have
13 many things that -- and I don't have the time to
14 actually go through every one of them, that Ethicon
15 should have warned about. And I want to be clear,
16 are you saying that warning should have come in the
17 Instructions For Use?

18 A. Yes.

19 Q. And if a doctor had gone through Ethicon
20 training, and had learned it in training, but it was
21 not in the IFU, would you feel that Ethicon had met
22 its duty to warn?

23 MS. MARIGLIANO: Object to the form.

24 THE WITNESS: No, because not all

CERTIFICATE

STATE OF GEORGIA:

COUNTY OF CLAYTON:

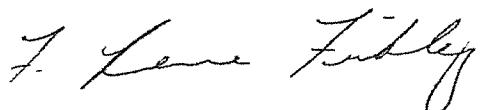

I, F. Renee Finkley, a Certified Court Reporter in and for the State of Georgia, do hereby Certify:

That prior to being examined, the witness named in the foregoing deposition was by me duly sworn to testify to the truth, the whole truth, and nothing but the truth.

That said deposition was taken before me at the time and place set forth and was taken down by me in shorthand and thereafter reduced to computerized transcription under my direction and supervision, and I hereby certify the foregoing deposition is a full, true and correct transcript of my shorthand notes so taken.

I further certify that I am not of kin or counsel to the parties in the case, and I am not in the regular employ of counsel for any of the said parties, nor am I in any way financially interested in the result of said case.

IN WITNESS WHEREOF, I have hereunto subscribed my name this 18 day of April, 2016.

F. Renee Finkley, RPR, RMR, CRR, CLR
Georgia CCR-B-2289
